

Reuters Wireless Delivery System

Real-time market data for financial professionals on the move

Your data – anytime, anywhere

In a fast-moving world, financial professionals need constant access to market data. Yet they cannot be constantly at their desks.

The new Reuters Wireless Delivery System (RWDS) lets managers and traders watch their positions and monitor market movements on their BlackBerry handheld devices, wherever they are in the world.

That means you can benefit from our timely and accurate market data not only when logged into your desktop but also while out and about.

The data coverage on RWDS is as comprehensive as you would expect from Reuters. If it's on your desktop, you can receive it directly onto your BlackBerry. Real-time Reuters and own contributed data, news, charts and alerts are presented via easy-to-navigate, customisable displays that are perfect for the smaller screen.

And because RWDS uses Research In Motion's BlackBerry as the delivery device, you already have the secure distribution architecture in place to get started with confidence. RIM technology protects millions of business emails – now you can rely on it for market data, too.

Benefits

- Data anywhere – mobile access to both Reuters and your own internally contributed data
- The latest news – breaking news reports on the world economy so you don't miss key developments
- Real-time alerting – upper/lower price limits, news and portfolio performance notifications
- Easy navigation – “two clicks to anywhere”
- Bandwidth efficient – only changes sent
- DACS-managed permissioning – avoids dual access to exchanges
- Brand consistent – application can be customised with your company branding

BlackBerry user interface

RWDS has been specifically designed for Reuters data content. That means all the familiar data types can be displayed including pages, chains and tiles with hot-spots for clicking through to further RICs and new stories. The BlackBerry client application puts all functions just two clicks away. Drop-down menus are content sensitive and RIC searching is fully supported. RWDS also has short-cut keys for speedy navigation.

You have access to:

- Full quotes – including contributor pages, chains and tiles, tick and daily trend colouring. Click through to further RICs and news
- News – colour-coded headlines and stories. Page through up to 30 days of history. Query on news codes, keywords, phrases or RICs
- Matrices – add your favourite RICs and incorporate internal data
- Chains – supports Reuters chains
- Charting – from intraday charts to 10-year historical charts
- Alerts – pushed in real-time
- Search – find a RIC quickly using keywords

How it works

All the real-time data, charts, news and alerts in RWDS come from your Reuters Market Data System (RMDS). Content from your RMDS is delivered to the RWDS server and then to the BlackBerry Enterprise Server using triple-DES encryption for maximum security. From there it is distributed to end users, who access it through a lightweight (110KB), easy-to-use client application installed on each BlackBerry. The client application can be managed and customised with ease from a browser-based web interface.

RWDS gives you freedom without sacrificing control. The data available to different users is managed by Data Access Control System (DACs), so you can prevent simultaneous login from the desktop and RWDS and thereby avoid dual exchange fees.

Administration and customisation

Users can personalise their RWDS using a browser-based web interface. New displays can be created, display fields modified, and instruments added or removed. The component pane shows how the display will look on the actual device.

To run RWDS you need:

- An RMDS, comprising at least a P2PS or RTIC, RDF, DACS and DBU
- BlackBerry Enterprise Server and associated Mobile Data Service. These items are readily available if your bank is running BlackBerry
- Users must have a Reuters data license to display Reuters content
- RWDS software – runs on a single server and connects to RMDS using the included RFA (Reuters Foundation Architecture) API
- A lightweight, 110KB Java application must be installed on each BlackBerry handheld

The screenshot displays the Reuters Wireless Delivery System interface. The main content area is titled "Asian Indices" and shows a configuration for a "Matrix" service. The "Service" is set to "IDN_RDF". Below this, the "RICS" list includes ".STI, AORD, ASIN, JKSE, CSE, HSI, NSEI, N225". The "Template" is set to "Custom".

The "Available FIDs" list includes:

- 1 PERMISSION
- 2 DISPLAYTEMPLATE
- 3 DISPLAY NAME
- 4 IDN EXCHANGE ID
- 5 TIME OF UPDATE
- 7 LAST 1
- 8 LAST 2
- 9 LAST 3
- 10 LAST 4
- 14 TICK:UP/DOWN
- 15 CURRENCY
- 16 TRADE DATE
- 17 ACTIVE DATE
- 18 TRADE TIME

The "Selected FIDs" list includes:

- 0 SYMBOL
- 6 LAST
- 11 NET CHANGE
- 12 TODAY'S HIGH
- 13 TODAY'S LOW

A table of market data is displayed, showing columns for Symbol, Last, Net Chg, and Day High. The data includes:

Symbol	Last	Net Chg	Day High
.STI	2450.50	-0.13	2460.77
AORD	4938.6	20.6	4962.4
ASIN	632.59	1.84	633.80
.JKSE	1415.224	13.033	1415.224
CSE	2146.25	-53.10	2205.52
.HSI	17290.01	40.06	17303.17
.NSEI	3313.10	38.75	3317.80
.N225	15857.11	292.09	15857.11

Below the table, a list of news items is shown, including "TOP NEWS* Banking and Finan", "TOP NEWS* Global Economy", "STOCKS NEWS US-U.S. stocks", "TOP NEWS* Emerging Markets", "TOP NEWS* Basic Industries", "TOP NEWS* Natural Resource", "UPDATE 1-RESEARCH ALERT-", "TOP NEWS* European Compa", "SNAPSHOT-Latest developmen", and "Toronto stocks open lower amid".
